

Prior to commencement of task, build a wireframe denoting location of all key elements (2 required one for desktop and one for mobile)

Desktop view

A hand-drawn wireframe for a desktop form layout, enclosed in a large rectangular border. The layout is organized into several sections:

- Header Section:** Contains three elements: a box labeled "logo", a box labeled "Title", and a small box containing a question mark "?".
- Form Fields Section:** A vertical stack of four identical units. Each unit consists of a horizontal box labeled "input" with a "label" positioned directly below it.
- Grouped Section:** A larger rectangular container holding two sub-elements: a horizontal box labeled "label" and a box labeled "radio buttons" positioned below it.
- Form Fields Section (Continued):** Another vertical stack of two units, each consisting of a horizontal box labeled "input" with a "label" positioned directly below it.
- Footer Section:** A single horizontal box at the bottom labeled "submit".

Mobile view

A hand-drawn wireframe for a mobile application interface. The layout is contained within a large rectangular frame. At the top, there is a header section with three items: a box labeled "logo", a box labeled "Title", and a small box containing a question mark "?". Below the header are three stacked rectangular boxes, each labeled "Input + placeholder". Following these are two larger rectangular containers. The first container holds a box labeled "label" and a box labeled "radio buttons". The second container holds a box labeled "Title" and a box labeled "checkboxes". At the bottom of the form is a single wide rectangular box labeled "submit".

Confirm how icons chosen for each input are relevant to the type of input being sought.

Each icon is relevant for their respective field inputs by choosing images that are commonly associated with one another. For instance the phone input has a phone icon to match, the email input has a letter icon and the two name inputs have icons of people. These are all things that have a common representation for each other and that is why they were used

What is it that you are trying to convey in the logo design created?

For the design of the logo, the idea was to have something that could be easily identifiable and is commonly associated with the overall idea of the form. For my form the goal was to create a gym registration form so the idea of creating a logo of a bicep felt fitting to encompass something relevant to the form.

What WHS principles were followed while working on this project.

While working on this project the principles followed were the following. I took regular breaks while working, sat in an ergonomic chair, adjusted the height of monitors and desk, used appropriate lighting and used wrist pads for the keyboard and mouse.
